

API Workshop

William & Mary ACM

2/6/2025

Agenda

01

Announcements

02

Intro to APIs

03

Interactive API Demo

ooo

&Hacks

Committee chair applications are open!

Due 2/8/2025

- Sponsorship Committee
- Finance Committee
- Marketing Committee
- Outreach Committee
- Technical Committee
- Logistics Committee

Hackathon Trips

Hackathon (n.) An event where people come together to make cool things fast, or just to learn!

We work to organize transportation and teams to build projects together!

Register for HooHacks today!

March 29th-30th

<https://www.hoo hacks.io/>

Upcoming Events

CS Banquet

February 13, 7:30pm - 9:30pm in Sadler Tidewater AB

CS Department Townhall

February 28, 12pm - 1pm in McGlothlin St Hall,
Room 020.

If you have any topics you'd like to see discussed at the town hall, please submit them through the form below by February 10th!

<https://go.wm.edu/K2n8cc>

Socials

Join our Groupme!

Follow us on Instagram!

Dues

For \$15, get access to:

- ACM Alumni Network
- ACM Dues-only member group chat and social events
- ACM T-shirt
- Other cool stuff

Talk to Lorenzo if you are interested!

What is an API?

An application programming interface (API) is a connection between computers or between computer programs.

Essentially, API's serve as an intermediary between you the programmer, you and some web server, where you ask the API for some data, and it will return it to you typically in json format.

API

End User with
Browser

Request

←
Bringing
from Kitchen

Chef

Quick Example

<https://www.restcountries.com/#rest-countries>

<https://www.alphavantage.co/documentation/>

Breakdown

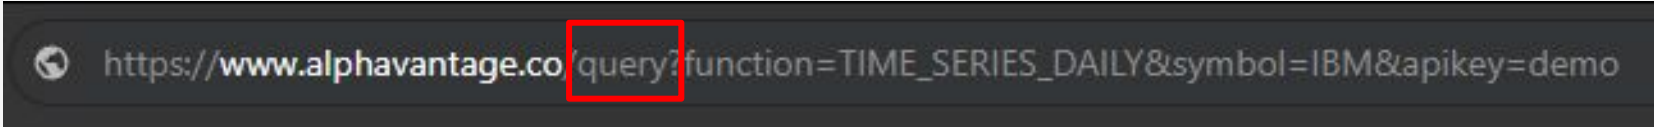

[https://www.alphavantage.co](https://www.alphavantage.co/query?function=TIME_SERIES_DAILY&symbol=IBM&apikey=demo)/query?function=TIME_SERIES_DAILY&symbol=IBM&apikey=demo

Base URL

Where the API requests are sent.

Breakdown

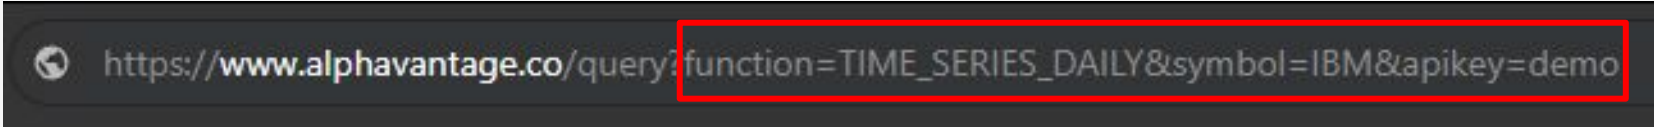

https://www.alphavantage.co/query?function=TIME_SERIES_DAILY&symbol=IBM&apikey=demo

Endpoint

The specific path on the server where requests are sent to retrieve data. In this case, query is the general endpoint for fetching different types of financial data

Breakdown

A browser address bar with a dark background. It contains a globe icon on the left and a URL. The URL is 'https://www.alphavantage.co/query?function=TIME_SERIES_DAILY&symbol=IBM&apikey=demo'. A red rectangular box highlights the query parameters portion of the URL, which is '?function=TIME_SERIES_DAILY&symbol=IBM&apikey=demo'.

https://www.alphavantage.co/query?function=TIME_SERIES_DAILY&symbol=IBM&apikey=demo

Parameters

Key-value pairs appended to the endpoint to modify the behavior of the API or filter the data it returns.

Why use APIs?

Cost efficiency

You don't have to store complex databases on your own server.

Innovation

You can build on top of existing services, creating new tools, applications, or integrations.

Automation/Scalability

You can trigger actions programmatically and offload certain tasks to specialized external services.

API Architectures

REST COUNTRIES PE

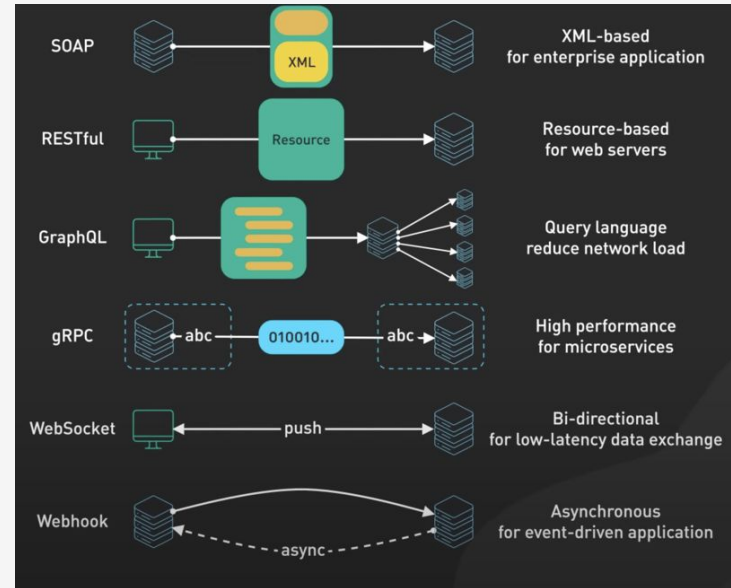

Get information about countries via a RESTful API

Current version: 3.1

API Architectures

- Rest
- SOAP
- GraphQL
- Webhooks

API Architectures

Rest

REST is the most commonly used architectural style for building web services and APIs, and it emphasizes standardized, stateless interactions between clients and servers.

Get

Retrieve data on a server.

Post

Create new data on a server.

Put

Update data on a server

Delete

Remove data on a server.

Real-World Examples

Payment processing

I have a small business and want to handle transactions on my website, but don't want to handle all the messy logic on my own server.

Social media integration

I want to give users the option to "login with Google" on my own website.

Maps and location services

I want to create my own "Pokemon GO" style game, but don't want to handle all the complex map and location logic myself.

Best Practices

Don't Share Your API Key!

Otherwise people can do bad stuff with it.

Check Rate Limits

Managing an API costs money, so companies will often limit you or charge you for usage.

Optimize API Calls for Performance

Don't make a gazillion requests a second, and consider caching responses.

Let's Make a Game!

You will need python and an appropriate IDE installed.

<https://github.com/porimol/countryinfo>

<https://tinyurl.com/WMACM2025>

Thanks for coming!

(Feel free to stay if you have any questions)

Next meeting:

Thursday, February 13th, 7pm in ISC 2280

You will learn about web scraping and create a game by web scraping RateMyProfessor, so make sure to be there!
